Abstract

Online learning is now the right choice to ensure teaching and learning activities continue in the midst of a disease outbreak situation that is currently sweeping Indonesia. Schools and parents must be able to synergize so that children remain motivated and have a high desire even though they are learning online. Parents should be able to introduce various uses of online learning media. CPM activities are carried out for parents at Tadika Cahaya. The method of implementation is that the lecturer makes observations at Tadika Cahaya to find out the types of learning media used online, secondly, socializes to parents about various online learning media that can be used during learning. Therefore, CPM activities are intended to socialize with parents so that they are more familiar with and can use various online learning media to make it easier for parents to guide their children during online learning.

Keywords— *Socialization, Parents, Online Learning*

PRELIMINARY

For students at the Kindergarten level, of course, parental involvement in online and offline learning is very important. In this case, it means that parents will really continue to be involved in the student's learning process. The difference is, the use of learning media should become a habit for parents to get to know and learn more about various online learning media. The simplest web-based learning is the Google Classroom Website which can be used to deliver learning materials, discussions, assignments and others related to learning activities. at home so that online learning activities can run smoothly by facilitating cellphones, laptops, quotas, Parents must have more extra time in helping children learn online. This is because students still need help in understanding the material and making assignments so that learning objectives can be achieved according to the teacher's instructions, Parents have a big role in realizing the importance of education for children and the development of student behavior and skills.

Will be much more creative and develop better because of the consistent involvement and adaptation of parents who accompany children in online learning, Parents must be able and understand the diversity of learning media that will be used online to facilitate students with variations in learning.

The involvement of parents in teaching children at the kindergarten level using audio-visual media has a high motivation, whereas if it is only done using visual media the motivation is low. The diversity of online learning media can increase children's interest in learning because it is more diverse and unsaturated, such as visual media (books, pamphlets, posters, etc.), meetings using audio visuals.

RESEARCH METHODS

The methods for implementing community service activities at Tadika Cahaya are as follows:

1. Provide socialization to parents about various online learning media (youtube, google meet, google class room, zoom meeting, audio visual, whatsapp group) that can be used by parents and teachers during the online learning process.
2. We made observations at Tadika Cahaya to find out the types of learning media used online.
3. Parents can use various online learning media and determine the appropriate learning media according to the situation of parents and students.

RESULTS AND DISCUSSION

Licence

Licensing was carried out several times to be able to carry out CPM activities at partner locations, namely in Tadika Ar Rahmah's Parents Environment. In 2020, the chairman has given permission to the head of the Tadika Cahaya School Committee and the school principal to carry out community service activities in 2020 to the parents of Tadika Cahaya's students. Partners gave permission and opened the door as wide as possible with the arrival of our lecturer team to carry out Community Service activities in the midst of the covid 19 pandemic. The socialization was carried out by holding a meeting at the school which was attended by several parents. This is because parents still come to school to take LKS and submit student assignments. So that the socialization activities carried out by the lecturer team were carried out face-to-face by meeting health protocols.

In October, observations were made by finding that parents feel very bored with the boring learning process. With the above problems, the school provides solutions to make it easier for parents to accompany online learning by using various online learning media. The learning media used include YouTube groups, Google Meet and WhatsApp. However, with limited knowledge and the use of online learning media applications, online learning media cannot be used optimally. Therefore, in November the partners were very enthusiastic about accepting the CPM activity carried out by the lecturer team to provide socialization to parents about online learning media.

The implementation of community service activities that will be carried out in 2020 are as follows:

1. This team provides solutions to parents regarding learning media that parents must know and use such as youtube, google class rooms, google meet and whatsapp groups, audio visual or video media.
2. Socialization of parenting assistance for children's online learning at Tadika Cahaya was carried out face-to-face.
3. On behalf of the school, it is certainly an input for the use of online learning media that is more attractive to both students and makes it easier for parents so that students do not get bored and more easily accept teaching materials.

CONCLUSION

From the implementation of community service activities to parents at Tadika Cahaya, it is concluded that:

1. Parents of Tadika Cahaya students as partners really welcome the activities carried out by the Lecturer Team because they can increase knowledge about online learning media such as google meet, google classroom, youtube, whatsapp group.
2. Parents of students received socialization of the CPM activities of the Lecturer Team face to face with health protocols with the approval of the head of the school committee which was attended by parents of Tadika Cahaya.
3. Parents finally know about various online learning media that can be used in learning for students at the kindergarten level, such as the use of Google Meet and Google Classroom.
4. Parents can determine the appropriate learning media to use during the online learning process that can be delivered to schools. Expectations from parents of students can vary in using google meet, youtube, google classroom.

SUGGESTION

Suggestions for the next PKM so that there are additional online media that are easier to understand.
